

How Is the Shop Performing?

Revenue, growth and customer review — January 2024 to June 2026

\$2.99M

TOTAL REVENUE

42,696

REVENUE-GENERATING
ORDERS

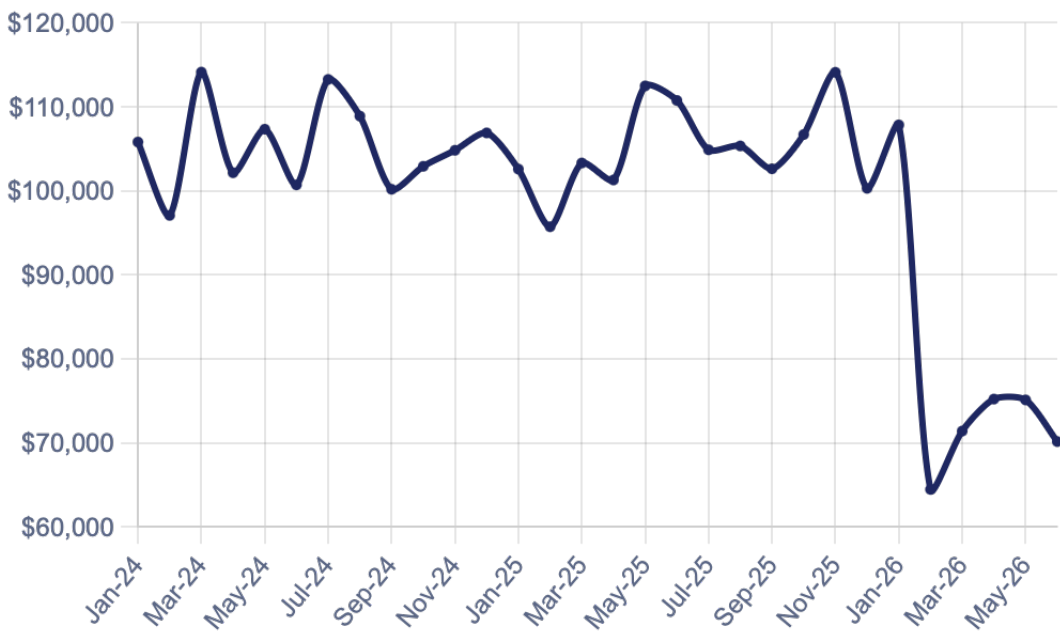

\$69.99

AVG. ORDER VALUE

8.0%

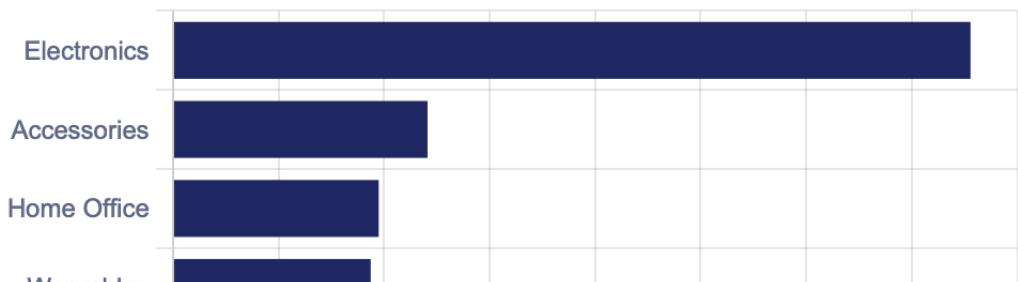

CANCELLED + RETURNED

Monthly Revenue

So what: revenue was flat for two years, then fell ~32% starting Feb 2026 and has stayed down for 5 months — a new, lower normal, not a blip.

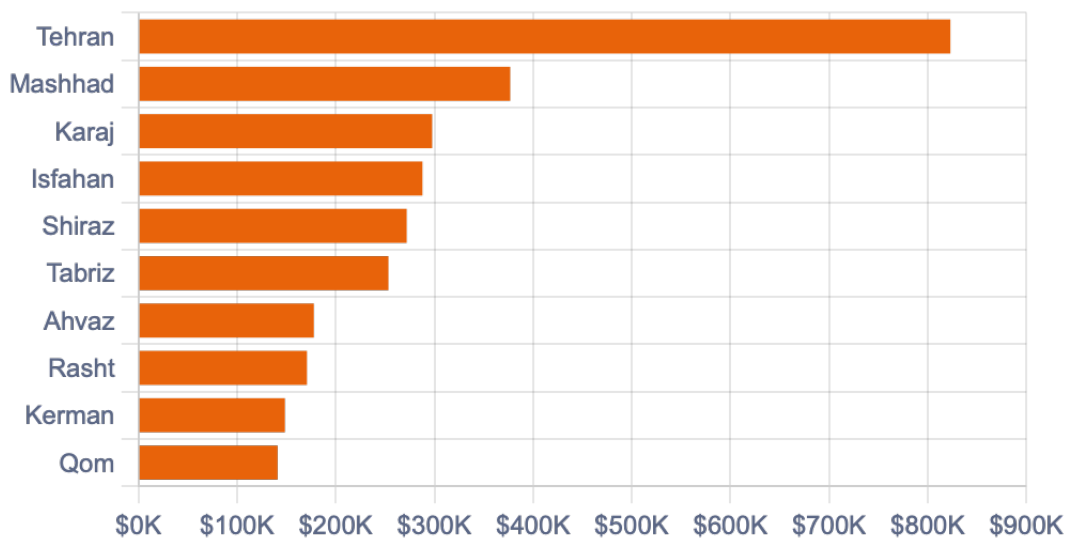

Revenue by Category

So what: Electronics dominates revenue, but the top sellers by units (Notebook, Phone Case) are different products entirely.

Revenue by City

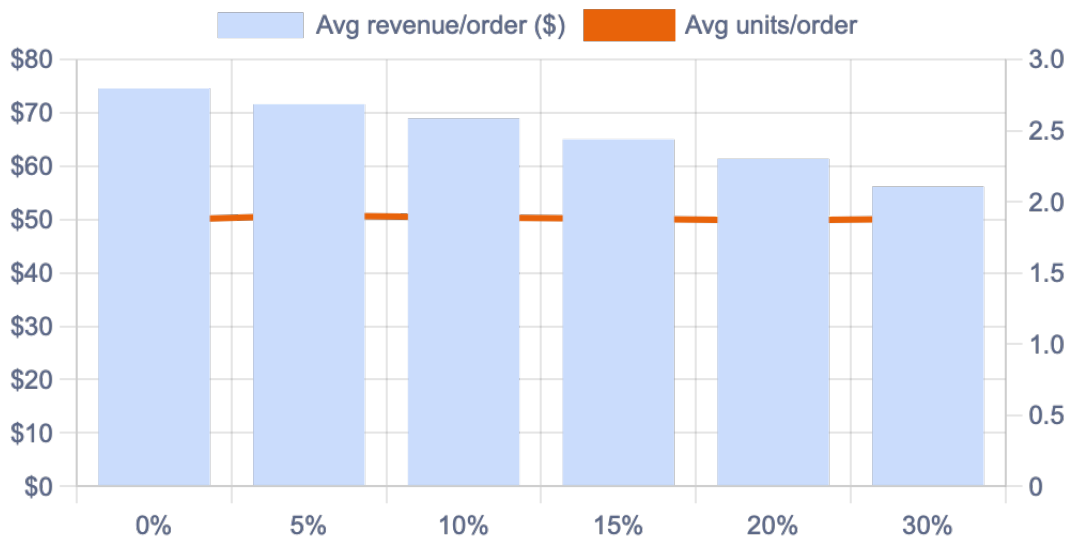

So what: Tehran alone brings in more than the next two cities combined.

Order & Payment Status

So what: fulfillment and payments are healthy — not the cause of the Feb 2026 drop.

Discount vs. Order Size

So what: units per order stay flat near 1.9 regardless of discount — deeper discounts just cut revenue.

Revenue per Customer, by Segment

\$305
NEW
3,407 customers

\$302
REGULAR
5,489 customers

\$300
VIP
962 customers

So what: VIP customers spend about the same per head as everyone else — the segment isn't yet a growth lever.

Recommendations

1

Find and fix the Feb 2026 demand drop

Orders fell ~31% and stayed down for 5 months, evenly across every category and city — check marketing spend, traffic and pricing changes from that period first.

2

Make VIP status pay off

VIP customers spend the same \$300/head as everyone else. Add real perks and track revenue-per-customer by segment monthly.

3

Replace blanket discounts with targeted offers

Discounts up to 30% don't grow basket size. Shift to bundles and reserve deep cuts for excess stock.

Data notes: cleaned 50,120 raw order rows down to 49,830 (removed duplicates, a placeholder customer ID, and invalid quantities/dates); standardized city spelling; revenue counts only Completed & Paid orders.
